

## Cleaning Suggestions

### **Brass or Metals**

When cleaning outside metals like brass door knobs etc., it's best to use a fresh piece of 3M Scotch Brite for the brushed look or a piece of 4 (0000) steel wool for a mirrored look.

### **Rust or Oil**

When cleaning rust or oil on a driveway or concrete, it's best to use a stiff brush or even a BBQ brush.

### **Ceramic Cook Tops**

For ceramic or glass top stoves, it's best to use the back of a yellow sponge pad or the 3M Scotch Brite pad with light agitation.

### **Mildew on Marine Vinyl**

For heavy or deep mildew on marine vinyl, it's best to use a stronger solution of 1/2 and 1/2 with warm water and a piece of 3m Scotch Brite with light agitation.

### **Tile Grout**

For heavily soiled tile grout it's best to use a slightly stronger solution, and since ProStuff is a penetrating cleaner, you will need to let it soak for a minute or so before wiping or brushing it.

### **Tile/Marble Floors**

For general cleaning of tile or marble floors with a mop, it's best to use a very small amount, such as 1/16 to 1/8 of an inch in a bucket with 4 to 6 inches of water.

### **Windows/Mirrors**

For streak-free window cleaning, mirror, granite counter tops, etc., 1 to 3 tablespoons or about an 1/8 of an inch in a spray bottle with the rest of the bottle filled with water.

### **Wood Decks**

For cleaning wood decks, teakwood or outside wood surfaces, depending on the severity of stain, anywhere from 1 part cleaner to 5 parts water to an even stronger solution of 1/2 and 1/2. Allow it to soak for a minute or two before wiping or light brushing and then rinsing with a hose.

### **Patio Furniture**

For outside patio furniture with mildew, depending on the severity of staining, 1 part cleaner to 5 parts water to a stronger solution of 1/2 and 1/2. Allow to soak for a minute or two before wiping or light brushing and then rinsing with a hose.

### **General Cleaning**

Use 1/3 ProStuff to 2/3 water or 1 part ProStuff to 4 to 5 parts water, depending on what degree of hardness (minerals) there is in the water.

### **Carpets**

For light carpet stains it's best to use a 1 part Pro Stuff and 5 parts water. Spray thoroughly and rub mildly with a rag or towel. No rinsing necessary. For heavier stains or liquid stains such as coffee, soda, wine, juices or animal urine, a 1/2 and 1/2 solution works best. Since liquid stains are much wider under the carpet than appear on the surface, we recommend saturating the area plus a few more inches around the stain. Then take a larger or more absorbent towel or cloth and step down on the towel with your foot. If needed you can repeat this process with warm water until no more stain appears on the cloth. Then let dry normally. This procedure will not only clean the stain but will remove the odor as well.

### **For Pre-Wash on Clothing Stains**

It's best to use the general cleaning dilution of 1 part ProStuff and 2 to 3 parts water. If the stains have already been washed and dried in, then let soak for a couple of minutes and work the cleaner into the fabric using both hands. ProStuff can also be used in your washing machine in the pre wash compartment or by adding a little to your liquid laundry detergent.

### **For Gutters**

When utilizing a jet stream nozzle to clean gutters with Pro Stuff, it's best to use a 1 to 1 ratio or 1/2 and 1/2, then let soak for a minute or two before rinsing. If you don't mind manually wiping the gutters, use a 1 to 5 ratio. Let ProStuff soak for a minute or two before wiping them clean.
